

Lumion

Software Course | Duration: 4 Weeks

A photorealistic rendering and animation course that turns 3D architectural models into cinematic stills and walkthroughs — a key skill for client presentations and marketing.

Who Should Enroll: Architects, interior designers, and visualization artists who want to produce high-quality renders and animations.

Prerequisites

- A basic 3D model from SketchUp, Revit, or similar software

Learning Outcomes

- Import and prepare 3D models for rendering in Lumion
- Build realistic environments with landscape, lighting, and weather effects
- Populate scenes with context: people, vegetation, and vehicles
- Create camera paths and animation sequences
- Produce final photorealistic stills and walkthrough videos

Week-by-Week Curriculum

Week	Focus	Topics Covered
Week 1	Import & Environment	– Interface overview and importing 3D models – Landscape, terrain, and environment setup
Week 2	Materials & Context	– Materials, lighting, and weather effects – Adding people, vegetation, and vehicles for realism
Week 3	Animation	– Camera paths and animation sequences – Rendering settings for stills vs walkthrough video
Week 4	Capstone Project	– Photorealistic render set for an imported building model – Final animated walkthrough video

Capstone Project

A photorealistic render package and animated walkthrough video for a client-style presentation.

Certification: On successful completion, learners receive the VCTA Certificate of Completion, along with a portfolio-ready project file that can be showcased to employers or clients.
