

SketchUp

Software Course | Duration: 5 Weeks

A fast, visual 3D modeling course for architects and designers — covering conceptual massing, materials, and site context modeling to communicate design ideas quickly and clearly.

Who Should Enroll: Architecture and interior design students, and professionals who need quick conceptual 3D modeling skills.

Prerequisites

- No prior 3D modeling experience required

Learning Outcomes

- Build accurate 3D massing models using push-pull modeling
- Organize models using groups, components, and layers
- Apply materials, textures, and basic terrain/site context
- Set up scenes and walkthroughs for design presentation
- Produce a presentation-ready conceptual model of a building

Week-by-Week Curriculum

Week	Focus	Topics Covered
Week 1	Modeling Basics	– Interface, navigation, and drawing tools – Basic 3D massing and push-pull modeling
Week 2	Organization	– Groups, components, and layers – Editing and reusing components efficiently
Week 3	Materials & Context	– Materials, textures, and basic terrain modeling – Adding site context: roads, landscaping, neighboring structures
Week 4	Presentation Tools	– Scenes, animation, and walkthroughs – Plugin/extension basics for enhanced rendering
Week 5	Capstone Project	– 3D conceptual model of a building with site context – Rendered views and a walkthrough presentation

Capstone Project

A presentation-ready 3D conceptual model with site context, rendered views, and a walkthrough.

Certification: On successful completion, learners receive the VCTA Certificate of Completion, along with a portfolio-ready project file that can be showcased to employers or clients.
